KASEYA SECURITY SUITE
FOR MSPs

Making cybersecurity effective, efficient and easy

Organizations everywhere are witnessing a constant rise in the volume and severity of cyberattacks. The IBM Cost of a Data Breach 2022 report pegs the cost of a data breach at $4.4 million and the average cost of a ransomware attack at $4.54 million.* SMBs spend an average of $955,429 to restore normal business in the wake of a cyberattack.**

Phishing-based email fraud is rampant, while dangerous attacks like ransomware, malware and data theft have become commonplace.

It falls to MSPs to protect the continuity of their clients' business operations, guard against financial damage, protect valuable data, and shield clients and their employees from fraud, breaches and cybercrime.

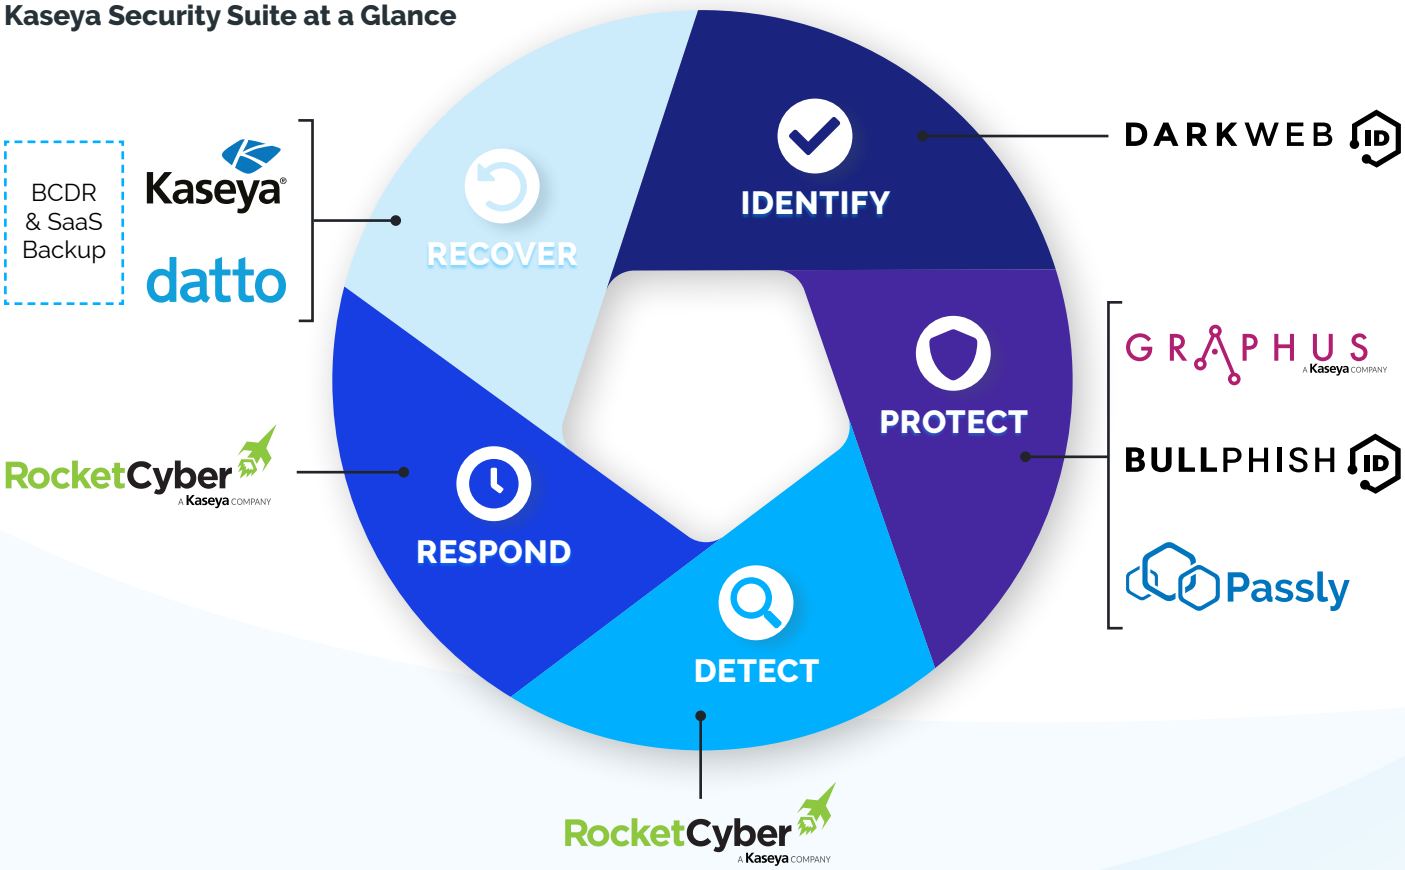

To add to the pressure, compliance with federal, state and local regulations is front and center for many of your clients since the penalties for non-compliance are high and rising.

Moreover, your clients' ability to purchase and maintain cyber insurance coverage is greatly impacted by the protections they have in place.

To address these concerns and ensure the cyber safety and continuity of your clients' operations, you need to offer them a multilayered security strategy. Ideally, the solutions you provide should not only affordably protect your clients' main attack surfaces, but also work together to alleviate your MSP's workload.

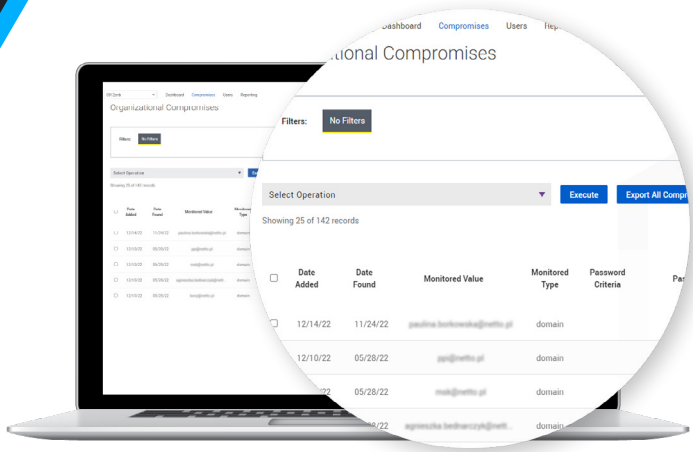

That's why Kaseya is the ideal choice for your cybersecurity offerings. Our solutions cover all vulnerability areas and are technically and commercially integrated with one another. This ensures comprehensive protection, streamlines your MSP's operations, reduces "vendor fatigue" and lowers your overall cybersecurity spend by as much as 30% compared to other vendors in the marketplace.

Kaseya Security Suite at a Glance

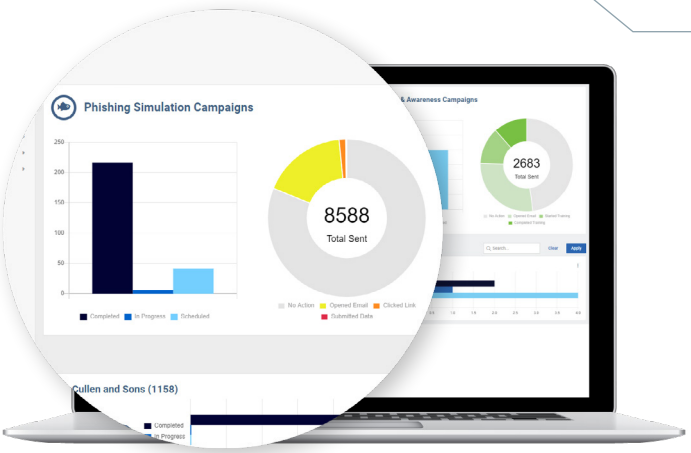

KASEYA SECURITY SUITE LINEUP

DARKWEB ID

Dark Web Monitoring & Compromise Alerting

- Protect your clients from data breaches and fraud
- Monitor for compromised or stolen credentials and PII
- Show prospects their dark web exposure to start security sales conversations and close deals

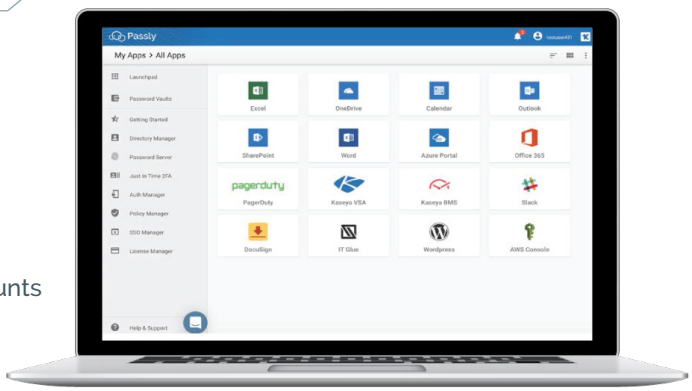

BULLPHISH ID

Security Awareness Training & Phishing Simulation

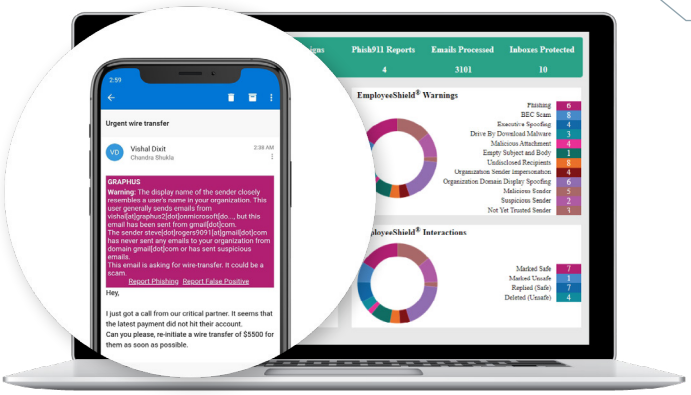

- Mitigate human error, training clients' employees to be a defense line against cybercrime
- Empower end users with cybersecurity and compliance acumen
- Reduce risk of cyber incidents by up to 70%

Passly

Secure Identity & Access Management

- Protect with 2FA, SSO and Password Manager in one solution (at a fraction of the cost of the competition)
- Prevent unauthorized access to systems, networks and accounts
- Safely store and organize clients' employee credentials

GRAPHUS
A Kaseya COMPANY

AI-Powered Email Security & Phishing Defense

- Shield clients from phishing, business email compromise (BEC), malware and ransomware
- Stop malicious emails before they ever reach your clients' employees
- Alleviate your MSP's workload and enhance productivity

RocketCyber
A Kaseya COMPANY

24/7/365 Threat Monitoring, Detection & Response

- Protect your clients without hiring security engineers
- Monitor, search, alert and report on network, cloud and endpoint threats
- Detect adversaries that evade traditional cyber defenses, like firewalls and antivirus
